## **DETAILED ACTION**

This is responsive to Applicant's election filed on 8/25/2005.

Applicant elects claims 1, 2, 5-13, and 29 with traverse since the broadest independent claims are patentable over the prior art.

Examiner notes that the broadest claim is not patentable as discussed below.

Therefore, the restriction requirement made on 7/25/2005 is final.

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2, 5-13, and 29 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Liao et al [USPAT 6,324,312].

Liao et al disclose an optical system and the method comprising:

A first branch 16 [front drawing] having a n1 including a first end and a second end:

A second branch waveguide 10 having a n2 and having a first end [bottom end] and a second end [top end];

Art Unit: 2874

wherein the second end of the second branch coupled to the first branch to from an angle, and any light passing in the reverse direction from the first branch to the second branch [inherent because n1 is greater than n2].

Note that the claimed relationships between the angle and the refractive indices are inherently shown by Liao et al device because n1 is greater than n2.

In re claim 5, the coupled area of 16 and 10 are inherently functioning as an absorber.

In re claim 6, Applicant fails to define the definition of "isolation" in the claim.

There should be an isolation between the first and second branch.

In re claim 7, it is not clear whether it is the device or method claim. The numerical aperture of the branches are inherently shown.

In re claim 8, some area of the branch 16 is tapered [decreased].

In re claims 9 and 10, again Applicant fails to define the definition of "optical choker" in the claim. Examiner considers the end part of the ends of the first and second branch as an optical choker.

Art Unit: 2874

In re claims 11 and 12, Liao et al show all the claimed limitation, therefore, the Liao et al device inherently functions as an optical isolator and optical attenuator.

In re claim 13, Liao et al show in 3A and 3B rectangular cross-sections.

In re claim 29, Liao et al inherently show the method steps.

## Conclusion

In formation regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <a href="http://pair-direct.uspto.gov">http://pair-direct.uspto.gov</a>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).

For all official patent application related correspondence for organizations reporting to the Commissioner of Patents:

- Correspondence that is transmitted by facsimile must be directed to the central facsimile number, (703) 872-9306.

Art Unit: 2874

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Further references of interest are cited on Form PLO-892, which is attachment to this office action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ellen Kim whose telephone number is (571) 272-2349. The examiner can normally be reached on Monday through Thursday.
